June 2026 commissions: what we pay, what I would hold, and why

Written summary for the Sales Compensation Analyst case. Prepared by Sudhanshu Singh. Model: June_2026_Commissions_Model.xlsx (tabs 1 to 11 untouched; all logic in the Calc tabs; Python replica included). Figures in USD unless stated.

1. The month in one view

Applying section 07 exactly as written, June 2026 commission for the 80 reps is **$413,214**. The amount I would release is **$403,875**. The whole $9,339 gap is one account (ledger item 1). Account Executives earn $191,135, Account Managers $84,253 including nine retention SPIFFs worth $7,500, managers and directors $116,572, and the Head of Sales & AM $21,255. Ten reps are paid outside the US dollar: six in CAD at 1.40, three in MXN at 20.00, and one in Puerto Rico in USD at 1.00. Every number traces from Payout_Summary to Calc_Reps to Calc_Accounts to the raw rows; the Python replica in the repo reproduces every rep to the cent.

2. Exceptions ledger, ranked by dollars moved within three groups

HOLD: the plan as written pays it and I would not release it without a decision. NAIVE: a straight read of the extracts would have paid it wrong; this model does not. CALL: a judgment the plan leaves open, sized both ways. Dollars are June commission across every rep affected, roll-ups included: HOLD dollars are real, NAIVE dollars are what the model prevents, CALL dollars are the width of a decision.

#	Finding	Records	Reps	USD moved	Treatment in the model
HOLD					
1	GTM account 3ffe588d (closed by Jon Snow, live 1 June): 313 shifts posted in June, 45 worked, a 14% fill rate against 81% across the other 39 GTM accounts (by shifts posted; the weakest of them fills 50%). GTM credits gross value on posted shifts, so the plan credits $41,081 of revenue on $8,100 of net revenue, lifting Jon Snow from 15% to 152% of quota and from $721 to $7,883. Slack corroborates: Jon loading shift templates for rural sites, Ops and Forrest Gump finding the facility did not ask for the volume.	313 shifts	4	9,339	Credit withheld in the recommended column (Inputs!B39). Worked shifts only would release $1,258; treating it as a Standard account $1,726. Decision needed; see section 5.
NAIVE					
2	Joiners, leavers and ramp by calendar day. Ron Weasley started 30 June (one day), Tom Sawyer 15 June, Severus Snape left 29 May, Katniss Everdeen 12 June; six more reps are mid-ramp. A full-month ramp floor or an unprorated statement overpays: Ron $4,640, Tom $2,800, Frodo $1,120, Severus $1,318, Katniss $619, plus roll-ups.	10 HR rows	13	14,160	7.10 and 7.11 applied by day: floors prorate, credit only on dates employed, managers still carry the revenue.
3	Expansions. 22 accounts have a second Closed Won opportunity in June. Processing per opportunity resets go-live and drops the account from the AM's book for the month.	22 opps	26	4,060	Go-live is the earliest Closed Won (7.3).
4	Approved credits on accounts that were not yet existing in June: 34 tickets, $8,249. Charged to the owner they would cut AM numbers and flip Doc Brown's SPIFF.	34 tickets	24	1,624	Excluded: credits reduce Existing revenue only (7.2, 7.7).
5	Denied credit tickets (254). Subtracting them cuts AM numbers.	254 tickets	33	533	Ignored (7.2).
6	Hygiene with no June effect here: 12 non-won rows carrying a closed_won_date, 11 opportunities live before they were won, 2 wins dated after the closer left (Severus Snape, Katniss Everdeen; both second opportunities on existing accounts), 4 accounts with no shifts, 59 Slack rows against a dictionary count of 55. Eight Standard accounts post 900 or more shifts a month at 20% to 31% fill: harmless because Standard pays on margin, but the same pattern under a GTM tag would pay.	43 rows	0	0	Stage governs (7.3). Legolas reports a Negotiation-stage credit on his issued statement that nothing in the export supports: reconcile the issued statements against this model.
CALL					

#	Finding	Records	Reps	USD moved	Treatment in the model
7	HR dates contradict each other and Slack. Jay Gatsby and Scout Finch show ENT AE from 1 May with the SMB role ending 7 June and 31 May (Jay says 8 June); Lord Voldemort shows manager from 1 May (he says 22 June); Walter White shows SMB AE since 2021 (he says he started two weeks before 12 July). Under the plan's own rules a corrected date changes nothing for the first three (Current Role decides the plan, quota does not prorate for a role change, the manager snapshot holds for the month); the exposure is a leadership choice: SMB rates on Jay and Scout's SMB-closed deals would add $11,488, prorating Voldemort's carry from 22 June would cut $2,683. If Walter White's start date is wrong, 7.11 and the ramp floor cut his pay by $2,812.	4 HR rows	4	0 to 14,171; 2,812	HR snapshot governs (Appendix A). Escalated for HR to confirm effective dates before payroll.
8	Ramp restarts on promotion or rehire. Anna (ENT AM, 11 May) is floored at $450,000 against a $314,843 book; Percy Jackson at $217,500 against $150,044; Gimli (rehired 4 May), Jay Gatsby and Scout Finch lose accelerator eligibility, Gimli at 120% of quota and Scout at 128%.	5 HR rows	9	3,747	Restart applied as 7.10 reads. Without it: Anna and Percy $900 less each with their chains, Gimli $187 and Scout $339 more. Flagged as a design issue.
9	Closers not employed when the deal closed. 194 accounts carry a closed_by_owner_id whose HR start date is after the first Closed Won (189 if Gimli's 2022 to 2024 stint is respected); 8 carry June credit (Tom Sawyer 3, Frodo 2, Gimli 2, Ron 1). After floors and 7.11 only Gimli's two, closed in April during his gap, move money.	194 accounts	4	1,754	Paid as 7.4 reads (export governs). CRM audit of closed_by recommended; Inputs!B40 holds it.
10	GTM shifts posted before the comp month on windows that opened in June (two accounts).	2 accounts	5	915	Recognised in the month the window opens (Inputs!B38); about $230 once item 1 is held. See assumption 2.
11	account_first_worked_shift_date: 49 accounts have no worked shift on the given date; the first observed shift is 1 to 9 days later, which shifts window edges.	49 accounts	16	814	Given date used, as the data dictionary instructs.
12	Blank closed_by_owner_id on two June go-lives: $1,432 of F1-30D revenue credits nobody, managers included.	2 opps	0	184 forgone	Nobody credited (7.4, 7.8). CRM fix requested.

Item 1 is the one that matters: it is the only line where the plan as written sends money out the door that should not go. Everything else is either prevented by the model (NAIVE) or sized for a decision (CALL).

3. Assumptions where the plan is silent

1. **Window arithmetic.** Day 1 of F1-30D is the first worked shift itself, so the windows are the first worked date plus 0 to 29, 30 to 59 and 60 to 89 days. Recommend writing the day count into the plan.
2. **GTM shifts posted before the window opened.** They fall in F1-30D (7.6) but no earlier statement could have recognised them. I recognise them on the first statement where the window exists. The alternative moves $915. Recommend codifying one treatment.
3. **Employment test (7.11).** F1-30D revenue is tested by worked date (posted date for GTM), window improvements by the window close date, and Existing revenue by worked date too, with the month's credits following whoever held the book while employed. Katniss Everdeen is paid for shifts worked through 12 June, $230. No Account Manager joined or left in June.
4. **Manager roll-up.** Managers carry the full June revenue of every account beneath them, including what a leaver or late joiner is not paid, after each report's ramp floor (7.8). The floor itself counts as revenue carried.
5. **Ramp restart on a lateral move.** SMB AE to ENT AE on 1 May is treated as a promotion into a ramped role, so the clock restarts (7.10). If leadership reads it as lateral, Scout Finch gains $339 of accelerators and nothing else changes.
6. **Credits on accounts not yet existing** reduce nobody's number this month, rather than the future owner's.

7. **Retention SPIFF book.** Accounts live before 1 May and held in June, measured in both months net of each month's approved credits; ramping AMs excluded even where the book held. Dr. Watson's book came in at 89.7% of May ($206,856 against $230,674), so no SPIFF.
8. **Quota for role changers.** No proration for a role change (7.11): Anna carries the full ENT AM quota for June.
9. **Currency.** The tab 3 rate is a single static rate; I recommend the plan name the strike date. Puerto Rico pays in USD at 1.00.
10. **Opportunity stage governs.** Residue rows are ignored, go-live is the earliest Closed Won, and an expansion in June does not restart an account.

4. Plan change: SMB AE accelerators from 1.2x / 1.3x to 1.3x / 1.5x

Basis	June as paid	June repriced	Delta	Who moves
Recommended payable (item 1 held)	403,875	405,253	+1,378	12 SMB AEs, the largest Yoda +$289, Hermione Granger +$213, Clark Kent +$175
Plan as written	413,214	414,931	+1,716	13 SMB AEs; Jon Snow +$339 is the largest, entirely from band II dollars on the held account

Both bases are on the Scenario tab. Assumptions: bands unchanged at $30k to $40k and $40k+; ramping reps stay ineligible; managers are unaffected because they are paid on credited revenue, not on reps' commission; nothing else in June changes. What surprised me: the change costs about 1% of SMB AE commission because only 13 of 28 SMB AEs clear $30k and are eligible, and the three ramping reps are excluded, including Gimli at 120% of quota. Band I only spans $10k, so the 1.3x step is worth at most $160 to any rep; the money sits in band II, which is where the one payout I want to hold also sits. If the goal is to reward the top third, widening band II or raising the multiplier there does more than touching band I.

5. Slack: the three I would escalate, and one note

- **The GTM posting pattern** (Jon Snow 3, 8 and 15 June; Doc Brown 2 July; Forrest Gump 3 July; Bruce Wayne 6 July; Dorothy Gale 7 July). Money is leaving under the plan for volume the facility did not ask for. Leadership decision, not an analyst call.
- **HR dates versus what reps say** (Lord Voldemort 5 July, Jay Gatsby 6 July, Scout Finch 4 July, Walter White 12 July). The HR record contradicts itself for three of them and contradicts Walter White outright; between $2,812 and $14,171 turns on the dates HR confirms. HR must fix the record before payroll.
- **Legolas, 7 July: credit for an opportunity still in Negotiation.** Nothing in the export supports it (his only non-won opportunity carries no dates), so the June statements already sent hold credits this model cannot reproduce. Every issued statement needs reconciling against this model before anyone decides on restatements.

Answered directly, no escalation: Katniss (paid through 12 June), Scout and Gimli (ramping), Percy and Anna (floor, not override), Frodo (two ramp rates by design), Walter (floor, not stacked), Hermione and Tom (bands are incremental and do not prorate), Han Solo (USD), Jane and Elsa (tab 3 rate), Harry Potter and Luke (net terms move the revenue), Simba (denied changes nothing), Olaf (credit follows billing_month), Sherlock (earliest win counts), Winnie and Captain Hook (Current Role decides), Bilbo (segment does not), Mowgli (sum of reports, floors included), Darth Vader's July SPIFF (not in the plan without written approval).

> **Note to sales leadership (249 words)**
>
> **Subject: Hold on one GTM account before June statements are final**
>
> I am holding new-logo credit on one account and need your decision by Thursday to keep the payroll date.
>
> The account went live on 1 June as a GTM account, closed by Jon Snow. In June the facility posted 313 shifts and 45 were worked, a 14 percent fill rate. The other 39 GTM accounts fill 81 percent of what they post; Standard accounts fill 74 percent. Ops flagged the pattern, and Forrest Gump spoke to the facility: they expect a handful of shifts a day and did not ask for the volume. Jon told #sales-ops on 15 June that he has been loading shift templates for rural sites himself.
>
> GTM credits gross value on posted shifts, so the plan as written credits $41,081 of revenue for this one account. That takes Jon from 15 percent of quota to 152 percent and from $721 of commission to $7,883. His manager chain picks up another $2,177. Net revenue actually earned on the account in June was $8,100.
>
> My recommendation: hold the $9,339 until Ops confirms what the facility asked for. If the posts were in good faith, pay on worked shifts only. If they were not, pay nothing on this account and treat it as a conduct matter. From July, add a guardrail: GTM posted volume credits only up to a fill-rate floor, and Ops reviews any account filling under half of what it posts before statements go out.
